

Universal Pads

Universal pads are made of twin-bonded layers of melt-blown polypropylene. This creates a greater surface area, enabling the pad to suck up liquid quickly. The ultrasonic weld points fuse the layers of melt-blown polypropylene fibers together, allowing it to keep its shape even when fully saturated. Universal pads are effective for the absorption of fluids in the workplace. For example, they prove to be useful in petro chemical industries, machine factories, garages etc. These pads are designed to be placed on the ground by machines where released oil or coolants can be immediately absorbed by the pads.

Universal - Pads

Code	Description	Size [cm]	Package
371371142	Light-weight bonded grey pads	50 x 40	200
371371143	Standard-weight bonded grey pads	30 x 30	100
371371144	Heavy-weight bonded grey pads	50 x 40	100
